

Problem Solving and Programming in Business

Homework 2

E-mail me your project and print out the non-generated code to hand in to me. I need both.

Develop a .Net program containing a main form and a menu system. (See the syllabus for evaluation guidelines.)

Deliverables:

1. Put a label on the form and display the coordinates of the mouse – at all times, regardless of where it is on the form – in the text of that label.
2. From the menu, provide the following additional forms:
 - a. an “About Box”. Your “About Box” form should include at least the following, but feel free to get creative and include more:
 - i. the name of the program
 - ii. the date you last modified it
 - iii. your name as the program’s author
 - iv. an “ok” button that closes the form when pressed
 - v. the form should close automatically if the “escape” key is pressed.
 - b. a “survey” that presents the user with some survey questions.
 - i. Make the survey about any topic you like.
 - ii. Create at least six questions.
 - iii. Use different controls for as many of the questions as you can.
 - iv. Present the user’s answers (as text) on a different form at the end of the survey.
 - v. Be sure to include all necessary and convenient navigation buttons.
